## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

## PCT/FR2003/000053

I. Basis of the report							
1. With		ts of the international application:*					
$\boxtimes$	the international application as originally filed						
$\boxtimes$	the description:						
	pages	1-10	, as originally filed				
	pages		, filed with the demand				
	pages	, filed with the letter of					
$\boxtimes$	the claims:						
	pages	1-14	, as originally filed				
	pages	, as amended (together with an	y statement under Article 19				
	pages		, filed with the demand				
	pages	, filed with the letter of					
$\boxtimes$	the drawings:						
	pages	1/2-2/2	, as originally filed				
			, filed with the demand				
	pages	, filed with the letter of					
П	the sequence listing p	part of the description:					
			, as originally filed				
	magag		, filed with the demand				
		, filed with the letter of					
2. With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.  These elements were available or furnished to this Authority in the following language which is:  the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).  the language of publication of the international application (under Rule 48.3(b)).  the language of the translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/ or 55.3).  3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:  contained in the international application in written form.  filed together with the international application in computer readable form.  furnished subsequently to this Authority in written form.  The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.  The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.							
in i	the descrip the claims, the drawing This report has bee beyond the disclos  lacement sheets which his report as "origination to the content of the claims, the descrip the descrip the descrip	have resulted in the cancellation of:  otion, pages	nder Article 14 are referred to ain amendments (Rule 70.16

1.	Statement	. ,		
	Novelty (N)	Claims		YES
		Claims	1-14	NO
	Inventive step (IS)	Claims		YES
		Claims	1-14	NO
	Industrial applicability (IA)	Claims	1-14	YES
		Claims		NO

- 2. Citations and explanations
  - 1. Reference is made to the following documents:

D1: EP 1 050 592 A;

D2: EP 1 211 329 A;

D3: EP 0 869 189 A;

D4: EP 0 562 250 A;

D5: WO 02/44430 A.

#### 2. Claims 1 and 14

2.1 D1 (claim 1) discloses a method for quenching workpieces, for example, after a carburising heat treatment operation. The quenching gas contains, for example, CO<sub>2</sub>, CO, H<sub>2</sub>O, NH<sub>3</sub>, H<sub>2</sub>S, methanol or mixtures thereof. Gases of this type absorb infrared radiation and are necessarily pressurised (see D1, column 1, lines 8-14 and 24-29). According to the preferred embodiments, the quenching gas contains 50% of H2 and 50% of CO (D1, column 2, lines 19-23) or a CO<sub>2</sub>-He mixture and 0.5 to 5% of CO (column 2, lines 52-54) or a mixture of nitrogen and 10% of CO (column 2, lines 55 and 56).

In claim 1 of the present application, the gases are

#### INTERNATIONAL PRELIMINARY EXAMINATION REPORT

selected in such a way as to enhance heat transfer and the convective transfer coefficient. These features are defined in vague and relative terms and do not allow the claimed method to be differentiated clearly from the method disclosed in D1 of which the aim is to optimise the quenching conditions.

It follows that the subject matter of claim 1 is not novel (PCT Article 33(2)). This also applies to independent use claim 14.

2.2 For the same reasons, the subject matter of claims 1 and 14 is not novel over documents D2, D3, D4 or D5.

D2 discloses a method for quenching steel workpieces after a carburising heat treatment operation. The pressurised helium-based quenching gas contains a proportion of carburising gas. According to D2 (page 4, lines 44 and 45 and table 2), the quenching operation is carried out using a gas containing approximately 90% of helium, 3% of carbon dioxide, 2.1% of hydrogen, 1% of carbon monoxide and 3.8% of nitrogen.

According to D3, the addition of  $CO_2$ ,  $H_2S$  or water vapour, in a proportion of up to 30%, to a pressurised quenching gas selected from He,  $H_2$  or the mixtures thereof enhances the speed of quenching (claims 1, 2 and 4; column 2, lines 40-49).

D4 describes the advantageous effect of adding a gas such as  $H_2$  to a quenching gas. The example on page 10, line 21, relates to a quenching gas containing 40% of  $N_2$ , 20% of CO and 40% of  $H_2$ .

#### INTERNATIONAL PREDIVINARY EXAMINATION REPORT

In the pressurised quenching method known from D5, the cooling gas comes from the heat treatment atmosphere (claims 1 and 2). The composition of such a gas is, for example, 55% of  $N_2$ , 30% of  $H_2$  and 15% of CO (page 6, second paragraph).

#### 3. Dependent claims 3 to 13

The features in claims 2, 3 and 5 to 13 are known from at least one of the cited documents. The same is true of claim 4 because the expression "order of magnitude" is so vague that it is impossible to differentiate the claimed subject matter from the methods disclosed in the cited documents.

As far as claims 11 and 12 are concerned, see document D3 (claims 1 and 4).
